To whom it may concern

LETTER OF ASSESSMENT

From 30th of September to 18th of October, 2024, pursuant to our agreement with Atlassian, Inc., the ACROS Security Assessment Team conducted an external penetration assessment and source code review of Atlassian Guard Detect, performed by two security researchers.

The assessment's objective was to identify as many security defects and security concerns as possible using the agreed-upon effort, prioritizing on the types of high-severity issues and issues that are more likely to be found by external attackers and researchers. Both manual and automated methods were used in the assessment.

Atlassian provided access to all relevant source code repositories and documentation, as well as engineers who provided prompt answers to our questions.

Atlassian has been provided with detailed findings and recommendations resulting from the assessment.

In over 24 years of existence, ACROS has established itself as one of the leading global providers of highest-quality security research. Our customers are mostly global industry players who know that information security is one of the critical cornerstones of their business model and cannot afford to be unprepared for inevitable targeted and motivated cyber attacks.

ACROS works for financial institutions, software vendors, online service providers, cloud providers, virtualization solutions providers and others who consider security of their products, information and services critical.

Mitja Kolšek
CEO, ACROS d.o.o.
