

19th June 2024

Loom Inc.

85, 2nd Floor, 1  
San Francisco CA  
94105, United States

To whom it may concern,

Astra Security ([www.getastra.com](http://www.getastra.com)) was engaged by Loom to perform a Vulnerability Assessment & Penetration Testing (VAPT) on the following assets of Loom -

- Loom Web App
- Loom - Screen and Cam Recorder iOS Application
- Loom - Screen and Cam Recorder Android Application
- Loom Chrome extension
- Loom Desktop app (Windows & macOS)

The objectives of the engagement were to identify exploitable vulnerabilities, subvert standard workflows, gain un-authorized access to the application or user records, and attempt an underlying compromise. The assessment was conducted using a grey-box methodology. Testing was performed by Astra's security engineers on test environments between 7th September 2023 to 12th October 2023.

Upon completion of the testing, Astra provided Loom a detailed report of vulnerability findings and recommendations. After these fixes were in place, Astra conducted a re-test to ensure the vulnerabilities have been remediated effectively & subsequently issued a certificate of Pentest completion.

Astra is a leading continuous Pentest Platform working with 1000+ orgs globally. Astra follows the highest standards for security testing, vulnerability scanning and is an active contributor to industry leading open-source security standards and tools (OWASP WSTG, OWASP ZAP etc.).

If you have any questions or require further information about this engagement, please feel free to contact our team directly at [help@getastra.com](mailto:help@getastra.com).
