To Whom It May Concern,

Letter of Assessment

From 14-Oct-2024 to 21-Nov-2024, pursuant to our agreement with Atlassian Pty Ltd (Atlassian), elttam conducted a review of Rovo.

The Rovo security assessment consisted of two major tasks:

- Task 1 - The Rovo Features Security Testing consisted of performing a repeat security assessment of the Rovo and other related AI features. Priority was given to features that had limited coverage in previous security tests, as well as newly introduced features.
- Task 2 - The AI Red Teaming involved performing an adversarial simulation targeting Atlassian's prompt filtering and LLM models to identify security vulnerabilities and weakness that could be abused in ways that violate Atlassian's [Acceptable Use Policy](#) or lead to adverse, embarrassing, or harmful behaviour.

A dedicated team of 2 experienced security consultants conducted the security assessment over the specified period. The testing team had access to internal documentation, development guides, relevant repositories and got support from engineers. The assessment methodology used a code-assisted (white-box) approach and both automated and manual penetration testing techniques were used.

elttam is an independent security company providing research-driven security assessment services to the Fortune 500, global financial institutions, leading technology companies, Australian Federal Government, and up and coming technology start-ups. We combine pragmatism and deep technical insight to help our clients secure their most important assets.

Sincerely,

Matt Jones
Director
